

OLIDENT- OIIREVO

Unique nano-hybrid material with WAX-like consistency!

First on the market nano-hybrid composite, that is so convenient and easy to form. Its consistency is called „Wax-like“ enhancing the creation of highly aesthetic restorations with mechanical properties that guarantee the long-term reliable results.

Thanks to the exceptional resistance to compression OliREVO tolerates high loads, both on the occlusal and incisal surfaces. In addition, OliREVO has an unusually low solubility in water - more than seven times lower than the ISO standard! This and the low wear of OliREVO provides for long-term esthetic restorations.

„WAX-like“ CONSISTENCY FOR DENTIST COMFORT

The German specialists who created OliREVO took great care to make a user friendly composite that will surely impress all users. The unique WAXlike consistency is synonymous with smooth and easy handling of OliREVO. The non-stick characteristics allow for efficient molding and carving even in difficult restorative surfaces.

How do you evaluate the following parameters of OliREVO?

Consistency

64% ideal
 26% acceptable
 5% too low viscosity
 5% too high viscosity

Wettability

86% good
 9% sufficient
 5% very good

Modeling

55% good
 41% very good
 4% sufficient

Polishability

64% good
 32% very good
 4% sufficient

How do you evaluate OliREVO compared to your currently used composites?

82% comparable
 14% better
 4% worse

What properties of OliREVO have convinced you the most?

31% consistency
 29% modeling
 16% polishability
 13% aesthetic final result
 9% coloristic integration
 2% other

Would you use OliREVO in your practice?

73% probably
 23% yes
 4% no
